A number of these journals however are central to the INSPEC subject field and of a quality such that, virtually without exception, all articles are regularly abstracted. These journals are listed below.

The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 5p.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

# ELECTRONIC WARFARE

A special issue of the IEE Proceedings, Part F

Editors: M. C. Pinches, Dr. J. Clarke, Dr. P. M. Grant.

Electronic warfare techniques were initiated during the Second World War as radio countermeasures. It is now appreciated that the capability to detect the location of enemy equipments and deploy effective countermeasures is very effective in minimising hostile threats and maximising the effectiveness of one's own weapons.

The fast build up in arms and the significant advances in signal processing techniques over recent years have stimulated interest in electronic warfare to such an extent that the projected international western-world budget is currently in excess of £3,000 million.

This special issue provides an insight into the most recent developments in electronic support measures, electronic countermeasures, and electronic counter countermeasures.

Available now for only £12.00 (\$27.00)

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC database. Information is dispatched weekly on 150 mm x 100 mm (6" x 4") cards.

TOPICS

This is an SDI service based on standard profiles. There are over 70 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.
